of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid

(2) encoding a polypeptide whose expression is inhibited by the antisense

(3) an isolated

(4) an antisense included are:

(5) polypeptide or its fragment whose expression is inhibited by the antisense

(6) controlled acid; (4) an antibody capable of specifically binding

(7) the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular

(8) proliferation or the activity of a gene in an operon required for

(9) proliferation; (7) identifying a compound that influences the activity of

(1) dentifying a gene required for cellular proliferation or that has an activity against a biological pathway

(1) required for proliferation, or that inhibits cellular proliferation; (8)

(8) compound's activity; (11) a culture comprising strains in which the gene

(12) compound's activity; (11) a culture comprising strains in which the gene

(13) identifying an antistense mucleic acids are useful for

(14) contiferation of an organism. The antisense nucleic acids required

(15) contiferation of an organism. The antisense nucleic acids required

(16) contiferation of an organism. The antisense nucleic acids required

(17) contiferation of an organism. The antisense nucleic acids required

(18) contiferation of an organism. The antisense nucleic acids required

(18) contiferation of an organism. The antisense nucleic acids required

(28) contiferation of an organism. The antisense nucleic acids required

(29) contiferation of an organism. The antisense nucleic acids required

(20) contiferation of an organism. The antisense nucleic acids required

(20) contiferation of an organism. The antisense nucleic acids required

(29) contiferation of an organism. The antisense nucleic acids are useful for

(20) contiferation of an organism. The antisense nucleic acids are useful for

(20) contiferation of an organism. The antisense nucleic acids of a contiferation to isolate candidate 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          21-MAR-2001;

                                                                                                                               The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosts and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant
including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel composition comprising outer-membrane vesicles (OMV) prepared from a first strain of Neisseria meningitidis and 1 or more proteins which are present in OMVs prepared from a second strain of N. meningitidis, but which are not present in OMVs prepared from a second from the first strain. The composition of the invention demonstrates antibacterial and antiinflammatory activities and may be useful in the field of meningococcal biochemistry, in particular the trafficking and localisation of meningococcal proteins, as well as in the prevention or treatment of meningococcal infections, possibly via the production of a vaccine or gene therapy. The current sequence is that of a Neisseria meningitidis MC58 outer-membrane vesicle (OMV)-related membrane protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New compositions having outer-membrane vesicles and proteins from Neisseria meningitidis, useful in the field of meningococcal biochemistry, in particular for preventing and/or treating meningococcal

; Sequence 4, Application US/08541033A
; Sequence 4, Application US/08541033A
; Patent NO. 5879941
; GENERAL INFORMATION:
 APPLICANT: Schmidt, Robert R.
 APPLICANT: Miller, Philip
 TITLE OF INVENTION: RELATING TO THE '- AND POLYNUCLEOTIDES
 TITLE OF INVENTION: DEHTDROGENASES AND METHODS OF USE
 NUMBER OF SEQUENCES: 26
 CORRESPONDENCE ADDRESS:
 ADDRESSEE: Saliwanchik & Saliwanchik
 STREET: 2421 N.W. 41st Street, Suite A-1
 CITY: Gainesville
 STATE: Florida
 COMUTRY: USA
 ZIP: 32606
 COMPUTER READABLE FORM:
 MEDIUM TYPE: Florids
 COMPUTER READABLE FORM:
 MEDIUM TYPE: Florids
 COMPUTER: DEM PC Compatible
 OPERATING SYSTEM: PC-DOS/MS-DOS
 SOFTWARE: Patentin Release #1.0, Version #1.25
 CURRENT APPLICATION DATA:
 APPLICATION NUMBER: US/08/541,033A
 FILING DATE:
 CLASSIFICATION: 435

            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
